1. CAMAG TWIN TROUGH CHAMBERS

CAMAG Twin Trough Chambers offer several ways to specifically affect the TLC/HPTLC separation in order to improve it. Also it reduces the required volume of developing solvent compared to Flat Bottom Chambers. This is a classical developing tank for Thin-Layer Chromatography. Compared to a Flat Bottom Chamber less solvent is needed. A Twin Trough Chamber reduces disposal problems and allows preconditioning of the plate with any solvent and for any duration. For preconditioning or saturation the trough opposite to the plate is filled with developing solvent. The use of a saturation pad is recommended for a fast, homogeneous and reproducible chamber saturation process.

1) CAMAG® Twin Trough Chamber for 20 x 20 cm plates, with stainless steel lid – Cat.No. 022.5256

Price: Rp. 14.255.000 - *(Ready Stock 7 Pcs)*
